

Assembly Instructions

Durapole Mayfly and Flex

	<p>Ensure you have all components: base, pole and flag and bag.</p>
	<p>Assemble the pole. Insert top pole section into the base pole section.</p>
	<p>Insert pole into sleeve. You may need to use a bit of force as the pole needs to bend around the top of the flag. The sleeve is very robust.</p>
	<p>Make sure the tip is inserted into the reinforced pocket at the top of the black sleeve. This is important as this will ensure the flag has the right tension and will hold its shape. The reinforced pocket will reduce any wear on the flag.</p>

Durapole Swing only

	<p>A. Insert horizontal pole into top sleeve first.</p> <p>B. Insert vertical pole into the TOP of the vertical sleeve.</p> <p>C. Connect the vertical and horizontal poles as shown.</p>
---	---

	<p>Tension the cord around the catch at the bottom of the pole. Tie a knot so the cord does not slip.</p>
	<p>Place the pole on the spigot on the base. Push firmly down and viola – you have finished!</p>

CAUTION

Always place the flag well clear of any objects as the pole will flex in the wind and catch objects that are close by.
